## freeView X10P > KVM Console Extender KVM Console Extender

The freeView X10P is a CAT 5 extender designed to control a PC or KVM Switch from up to 500 feet away from your keyboard, mouse and monitor. The freeView X10P transmitter converts the signals from PS/2 and VGA to signals that travel on CAT 5 cable allowing them to be transmitted over a long distance to the freeView X10P receiver. The receiver converts the signal back to PS/2 and VGA.

The freeView X10P facilitates the control of devices from afar. It is an excellent solution for secure server rooms with restricted access, and also to allow staff to work outside of noisy server rooms.

Using the freeView X10P, the receiver and transmitter will allow you greater freedom in where you locate your desk while still allowing you to access remote servers.
